HANDLEBAR RISER INSTALLATION INSTRUCTIONS

1. Using a T-45 Torx socket, remove the bolts from the underside of the handlebar mount. (FIG 1) Set the bolts aside as they will not be reused, save the washer to reuse in later step. Note: You can leave your handlebars mounted in the handlebar mount.
2. Determine how much of a rise you want on your handlebar between 5mm-20mm. We recommend you do not go over 20mm. In order to do 20mm, stack the 5mm riser on top of the 15mm riser.
3. Take the risers that you want to use and stack them under the handlebar mount lining them up with the mounting holes.
4. Take the correct size provided bolt using the chart below and apply medium strength thread locker to the threads. Take the bolt and washer removed in step 1, thread it through from underneath the top triple clamp into the handlebar mount through the riser/risers. (Fig 2)

    5-10mm riser – 60mm bolt
    15-20mm rise – 70mm bolt

5. Tighten the bolts installed in step 4 to factory torque spec using an 8mm Socket or Allen Wrench.
6. Have Fun and enjoy your next ride.

WARNING AND DISCLAIMER

All parts manufactured, designed or sold by Enduro Engineering, Inc. (EEI) are to be installed by a licensed motorcycle dealer or a licensed motorcycle technician, Motorcycles can be dangerous. Serious injury, death and property damage can result from the use of motorcycles. This risk is increased by improper installation or misuse of after marker parts. EEI's customers must exercise good judgement in the use, control, alteration, part selection and installation, and maintenance of their motorcycles. In the event of a possible defect in material or design, or any other defect in a part manufactured, designed or sold by EEI, the responsibility of EEI is limited either a refund of the purchase price or the replacement of the part if EEI determines the part to be defective, and subject to EEI's inspection of the part within thirty (30) days from the date of purchase.
